

Global Document Coverage for Predictive DocV

Document Coverage in 180+ Countries

Support Summary

In this guide, "Supported" means that we are able to extract the key data elements from a given ID type, execute our fraud detection models, perform liveness on the document and selfie, and automatically compare the ID headshot to the selfie.

For ID types not "Supported" on this list, the system makes a best effort to provide actionable insights. For example:

- We can often extract data (name, date of birth, expiration date, etc.) from such IDs.
- Any data extracted will be automatically compared to the submitted data for the individual.
- We can recognize general fraud indicators such as non-live captures.
- We can compare the photo in any ID headshot to selfie images provided by the user.

Request for Specific ID Documents

For any ID types that are not currently "Supported," the system can often be tuned to add support for new IDs in approximately 5 business days. If you do not find the document that you need in the list below, please send a request to support@socure.com for that document.
